SafePassage Age Assurance — COPPA Compliance One-Pager

Legal-readiness documentation for U.S. operators subject to the Children's Online Privacy Protection Act (COPPA)

Product Overview

SafePassage provides facial age estimation and document-plus-biometric verification. Images are processed temporarily for checks and retries; results and audit records may remain in service history. COPPA responsibilities depend on the service, audience and complete consent flow.

Key Features:

- Dual verification modes: L1 (facial estimation) and L2 (ID + biometric match)
- Temporary images; retained results and audit history
- Age estimation and liveness checks; outcomes depend on capture conditions and deployment.
- Full liveness detection and spoof prevention
- SDK integration with a hosted verification flow
- Real-time audit trails and stateless API architecture

Compliance Statement

SafePassage supports age-related checks using temporary verification images. Verification results and audit records may remain in service history. Operators must assess the COPPA notice, consent, security and record obligations applicable to their service. An age check alone does not establish verifiable parental consent.

SafePassage makes no representations or warranties regarding legal outcomes. Please consult your legal counsel or contact SafePassage for the latest compliance documentation.

COPPA — SafePassage Compliance Summary

COPPA Requirement	Summary Description	SafePassage Implementation
Notice & Transparency (16 C.F.R. § 312.4)	Operators must provide clear notice of information practices and parental rights.	SafePassage provides transparent privacy notices to the platform and supports integration of required parental consent notices.
Verifiable Parental Consent (16 C.F.R. § 312.5)	Must obtain verifiable parental consent before collecting personal information from children under 13.	L2 can support an adult identity check. Parental status, consent and required records must be established by the complete operator consent flow.
Data Minimization (16 C.F.R. § 312.4(b))	Collect only information reasonably necessary to participate in the activity.	L1 uses a selfie; L2 uses ID and selfie checks. These checks support age or identity verification within the applicable operator flow.
Security & Confidentiality (16 C.F.R. § 312.8)	Maintain the confidentiality, security, and integrity of children's personal information.	Temporary images for checks and retries; results and audit history may remain.
Parental Access & Deletion Rights (16 C.F.R. § 312.6)	Parents must be able to review or request deletion of their child's personal information.	Access and erasure requests are handled under the applicable service policy; retained records must be assessed by type.
Recordkeeping & Accountability	Operators should maintain evidence of consent and compliance efforts.	Verification results and audit records support service history and accountability; their retention is separate from temporary images.

Regulatory Contact Readiness

Contact SafePassage for current implementation documentation. A COPPA assessment must account for the complete consent flow, security controls and applicable records, including any evidence required from the operator.
